

Weekly Report:

Last week, I read papers on the p2p systems and the p2p video streaming systems. I realize that there exist two main categories of p2p overlay network schemes, structured and unstructured. I intend to know more details on one case of every category. About the video multicast through p2p systems, the papers mention two overlay network structures, tree-based systems and mesh-based systems. We need to construct and maintain the peer to peer connections.

Now I get to know the p2p overlay network structures. I will try to read some papers about the p2p overlay network analysis and the process of video block transmission through p2p systems.
